

Pharmaceuticals - claims and how to prevent them

Transporting pharmaceuticals across all modes of transport requires a meticulous logistical approach. If mishandled, the intactness of these high-value products can be compromised by incorrect storage, mould, temperature deviations or many other parameters. The pharmaceutical industry is moving significant amounts of cargo to all geographies daily. Ensuring the goods' quality throughout the entire supply chain requires specialized storage facilities and handling procedures, and particularly close cooperation between all logistical service providers involved.

[Christian Gieschen](#), Surveyor at [Battermann & Tillery Group](#), will discuss key aspects to prevent pharmaceutical claims:

- Liability risk
- GMP + GDP
- Critical deviation and risk-based damage assessment
- Crucial steps in claims handling
- Claim examples

Following Christian's presentation, you will have an opportunity to ask questions. If you have any comments or queries prior to the session, please send them to education@iumi.com.
