

Blockchain: Transformation for Cargo Insurance

Published: 12 June 2018

International trade is a data-intensive process with a vast number of transactions being executed by various stakeholders who are involved throughout the entire supply chain. Blockchain technology has the potential to transform this process and to unlock significant possibilities for automation in the shipping and marine insurance industries.

This webinar will offer an introduction to blockchain technology by the two marine insurance industry experts [Tom Shinya](#), Deputy General Manager, Marine Underwriting Dept. Cargo Underwriting Group at [Tokio Marine & Nichido Fire Insurance Co.](#) and [DJ de Villiers](#), Insurance Industry Director APAC at [IBM Innovation Services](#). The initial overview is followed by specific aspects related to marine insurance, including a live demonstration and an example of how Tokio Marine & Nichido Fire Insurance Co. is already using the technology.
