

Humidity management during the transport of goods in containers

Published: 22 February 2019

In this webinar [Captain Uwe-Peter Schieder](#), Loss Prevention Manager at GDV (German Insurance Association) discusses effective ways to manage humidity during the transport of goods in containers to prevent loss and damage of cargo. Uwe's presentation serves as an introduction to various aspects necessary to consider for successful humidity management:

1. Water
2. Water content and quality
3. Relative humidity
4. Thresholds
5. Sorption behaviour
6. Test voyages
7. Condensation
8. Humidity management
9. Introduction of the E-Learning Programme

Webinar participants are invited to learn more about the topic in an interactive online learning programme which is available on the [IUMI website](#) free of charge. The content of the ELP has been kindly compiled and provided to IUMI members by GDV, the German Insurance Association. During his presentation Uwe also shows some sections of the ELP in a live demo to familiarise the webinar participants with the content of the online tutorial.
