

Marine accident analysis of groundings and collisions: How to learn from past incidents to avoid them in the future

Published: 10 April 2018

Marine accident analysis of groundings and collisions plays an important role in determining where additional safety improvements are necessary. In this webinar [Captain Paul Whyte](#) MBE AFNI, Master Mariner and Associate at LOC Group, provides insights into accident analysis related to groundings and collisions using real-life case studies and showcasing the software used. Key points covered in in this webinar are:

- Situational Awareness
- Surveying and Charts
- International Regulations for Preventing Collisions at Sea, 1972
- How Electronic Evidence Works
- Casualty Investigation and Accident Analysis
