

Presentation on marine insurance statistics and casualty trends at IMO

10th November 2022

On the penultimate day of the IMO's Maritime Safety Committee, Jun Lin, Chair of IUMI's Facts & Figures Committee and Head of Portfolio and Business Development at Gard, presented the latest statistics on marine insurance premiums as well as casualty trends. While the incidents generally show a downwards development, i.e. fewer casualties, a worrying trend continues to be fires. This is particularly true for containerships.

In the Q&A that followed Jun's presentations, questions about cyber risks, causation of severe weather as well as in relation to containership fires and losses of containers overboard were addressed.

The presentation can be downloaded [here](#).
