

The supply and use of 0.50%-sulphur marine fuel

20th August 2019

A number of maritime, refining, fuel supply and standards organizations have worked together to produce 'Joint Industry Guidance on the supply and use of 0.50%-sulphur marine fuel'. The publication is designed to provide guidance for stakeholders across the marine fuels and shipping industries, from fuel blenders and suppliers to end users. It presents the specific safety and operational issues relating to the supply and use of max. 0.50%-sulphur fuels, an overview of fuel quality principles, and the controls that should be put in place to ensure that safety issues are identified, prevented and/or mitigated.
